

ELECTRICITY MONITOR FACT SHEET

FACTS AT A GLANCE

Ghana seeks to achieve universal access to reliable electricity by 2030.

As of August 2022,

- Current access rate is 87%
 - Rural: 72.9%
 - Urban: 100%
- **1.1 million households** have no access to electricity

In April 2022, ACEP relaunched its electricity monitor platform to increase the public's interest in the country's power sector and its management. The platform offers the opportunity to make complaints when facing electricity challenges like power fluctuations. It also provides informative statistics on Ghana's power sector.

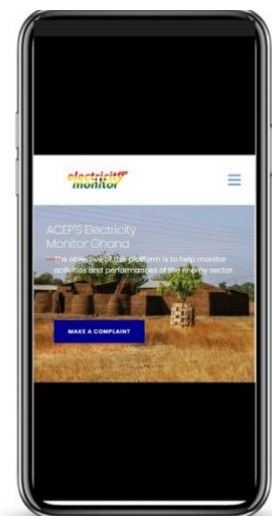

The platform has since received several complaints relating to accessibility and reliability. The complaints can be categorised into the following:

Limited access to electricity

Billing challenges

Limited access to meters

Power outages
